

CD 32 Instruction Card

Special Game Controller Instructions:

Use the left special feature bar to scroll through the verb control icons.

Use the right special feature bar to scroll through the inventory icons once the inventory scroll arrows are displayed on the screen.

Use the green button to bring up the map feature, when available. The map is explained in the main manual.

Use the yellow button to toggle the music on/off.

The red and blue buttons are used to mimic the left and right hand mouse buttons described in the main instruction book.

The directional button is used to move the pointer around the screen.

The stop/start button is not used.

Save Game Option:

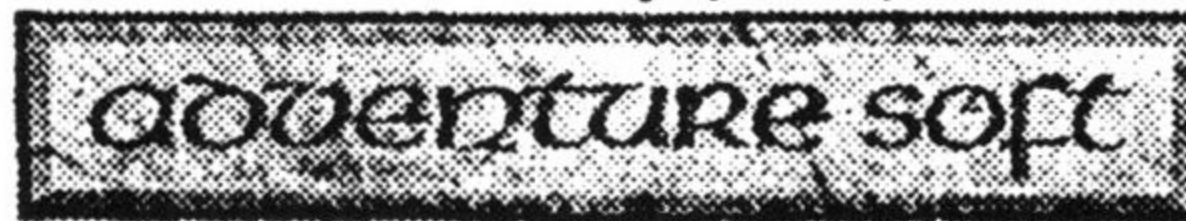

The Amiga CD32 has the option available to save your game position to the save game ram in your CD32. Use the postcard to access the save game feature, both to save a game or load a previously saved game. Due to memory restrictions you will only be able to save one

game position at a time. If you have locked other game information (see CD32 manual Locking Game Information) you will not be able to save your game position as Simon the Sorcerer uses nearly all of the available memory units for this feature. You will need to unlock all of the memory units (see CD32 manual for instructions on how to do this) in order to save your game position when playing Simon the Sorcerer. N.B. Using save features while running other software may well delete your Simon the Sorcerer saved game information.

Simon the Sorcerer has been designed so that it is impossible to get trapped in a position where the solution to the problem is not available to you. If you think that you are trapped you will find that you have been forced to bring the solution with you or it is available nearby.

Mouse Option:

It is possible to use an Amiga mouse if it is plugged into socket 2 on your CD32. With a mouse connected Simon the Sorcerer will play exactly as described in the main manual.
