**Multimedia is an often-used and seldom-defined term. Basically, multimedia combines fast personal computer hardware with advanced storage and sound capabilities to create an interactive experience that boasts cinematic graphics, music, speech, and animation. At the heart of the medium is an optical information system - computer data on laser-read compact discs.**

**One CD holds as much information as thirty typical 20-meg hard drives and can read into memory the equivalent of a 360K disk in just over two seconds. In other words, a game stored on one CD could, in theory, contain the same amount of information as one that stretched across some 500 high-density disks.**

mean to  
you?*

*It means  
multimedia  
is the
